

# MARINE ACID WASH

- ✓ Advanced triple action formulation
- ✓ Antifouling cleaning & etching solution
- ✓ Effective fibreglass boat cleaner
- ✓ Contains phosphorylated ethoxylate for better results with less acid

## ANTIFOULING BOAT HULL CLEANER

Cyndan Marine Acid Wash is an enhanced formula with Phosphorylated Ethoxylate for getting better marine cleaning results with less acid.

### Triple Action

**ACTION 1:** Excellent for renewal of fibreglass which is faded or stained from rust, exhaust fumes, environmental contamination etc.

**ACTION 2:** Ideal for removal of slime from hulls, anti fouling and running gear.

**ACTION 3:** When used on anti fouling, **Marine Acid Wash** etches the previous anti fouling to provide a surface which binds to the new anti fouling thus ensuring a better adhesion and longer life.

**For action 1:** Dilute **Marine Acid Wash** with up to 6 parts of water. Broom on to the hulls or decks. Allow to react for 2-3 minutes and rinse with high pressure water. For stubborn rust staining around metal fittings, detailing with a non scratching abrasive pad may be necessary.

**For actions 2-3:** Apply at a diluted rate of 1 part **Marine Acid Wash** with 10 parts water. Broom on, allow 2-3 minutes reaction time and rinse with high pressure water. A reapplication after all slime and foreign matter is removed is recommended to etch the surface prior to applying anti fouling.

## Finish off with Stainless Steel Sentry

**Marine Acid Wash** is a perfect companion product of **Cyndan's Stainless Steel Sentry**. **Stainless Steel Sentry** will provide a long term protection to all marine grade stainless steel, protecting it from unsightly tea staining and rust.

## SIZE:

1L, 5L, 25L, 205L

## IDEAL FOR:

- Boat hull cleaning
- Faded or rust stained fibreglass
- Slime removal
- Anti fouling
