

PICKLE IT LIQUID

- ✓ Removes welding stains
- ✓ Effective on all metals, particularly stainless steel
- ✓ Economical

ALL METALS WELDING STAIN REMOVER

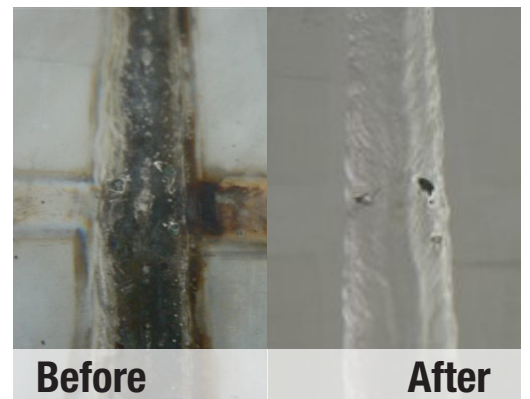

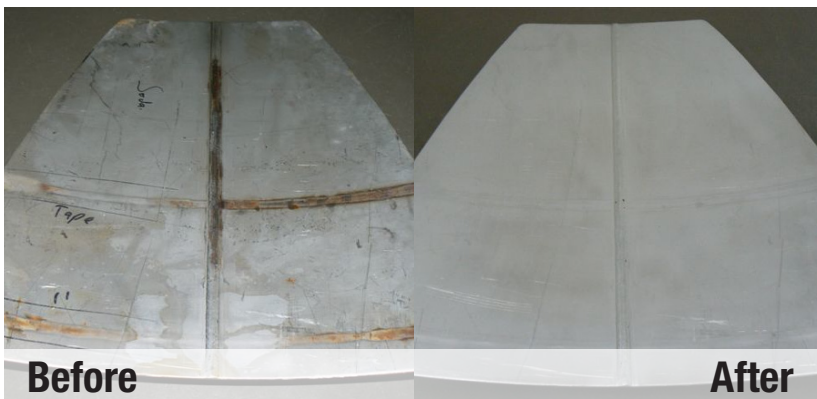

Pickling is the removal of heavy, tightly adherent oxide film resulting from hot forming, heat treatment and welding.

Cyndan Pickle It Liquid is a unique formulation based on the combination of Nitric Acid and Hydrogen Fluoride. The synergy between these two chemicals provides an extremely effective cleaning power for all welding stains.

Cyndan Pickle It Liquid is effective on all metals and particularly stainless steel. Stainless Steel welds are passivated which secures a protective coating and reduction in chemical post cleansing activity. The treated stainless steel, of all grades, is returned to its natural lustre.
