PROTECTA

UN 1993 HAZCHEM CODE 3[Y] PACKAGING GROUP III

Protector and Lubricant

DIRECTIONS:

SHAKE BEFORE USE

Shake well before use - when CYNDAN* PROTECTA is to be used as a protectant for metal parts (i.e. dies, jigs, meat hooks, etc.) it should be applied by either a spray, dip or brush method, ensuring the part is completely covered. The part should be left to drip dry on a rack.

When the part is dry a residual wax-like film is left to protect the part from rust and corrosion. It is best to store the protected part on any shelf surface other than metal.

When the part is required for use it may be cleaned with a solvent degreaser such as CYNDAN* DISLODGE. When CYNDAN* PROTECTA is to be used as a lubricant the applications vary greatly, for this reason it is best to contact your CYNDAN* Representative for details.

SAFETY: Avoid contact with eyes.

FIRST AID: If swallowed, do NOT induce vomiting, give a glass of water and seek medical attention. Contact the Poisons Information Centre (13 11 26 Australia; 0800 764 766 New Zealand). If in eyes, hold eyelids open and flush with water for at least 15 minutes.
